

WILDLIFE POPULATION INTELLIGENCE REPORT

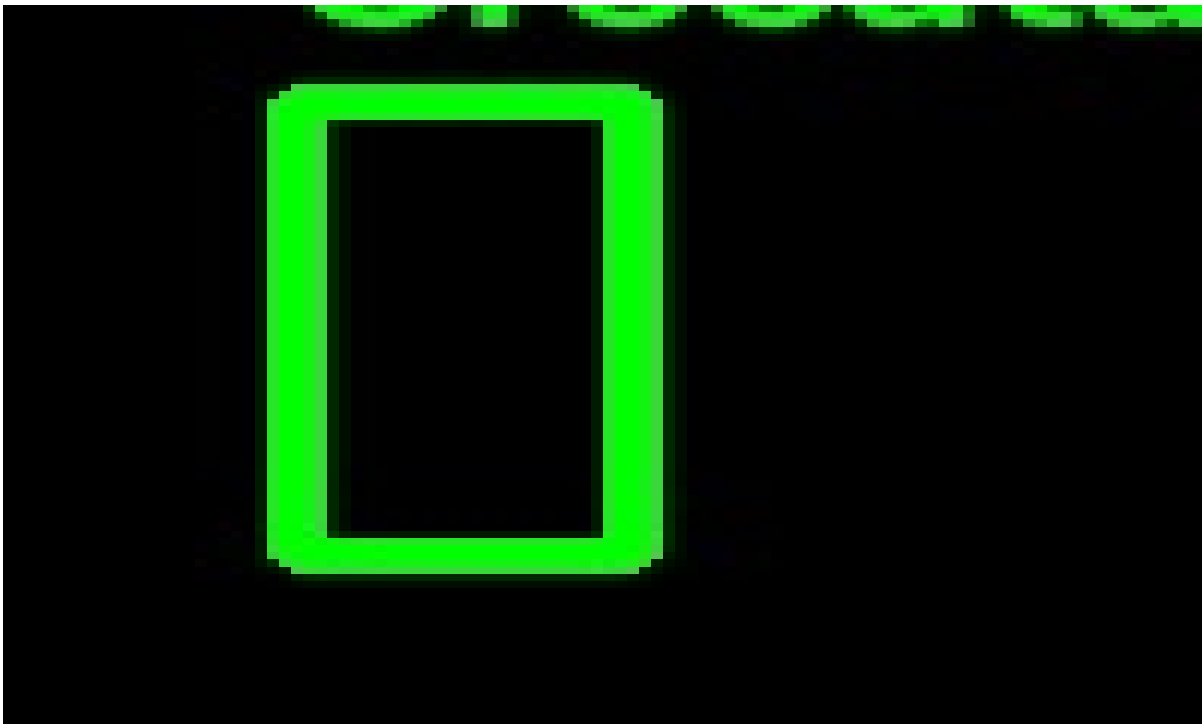

Automated Ecological Sighting Assessment Summary

Report Timestamp:	06 August 2026 04:25 UTC
Sighting Log ID:	6cfd910f-2446-4571-a108-ce3bc88123c1
Primary Class:	Spotted Hyena (Crocuta_crocuta)
Monitoring Site:	Nagarhole Zone A
Habitat Type:	Forest
Assigned Researcher:	System Administrator

SYSTEM LOGO: WILDLIFE PORTAL INTEGRATION

Image Detection Summary

The system analyzed the uploaded media frame using a confidence-gated YOLOv8 detector:

Det ID	Species Label	Confidence	Coordinates [x1, y1, x2, y2]
1	Crocuta crocuta	89.93%	[24, 13, 52, 76]

Species Knowledge Profile

Common Name:	Spotted Hyena	Scientific Name:	Crocuta crocuta
Kingdom:	Animalia	Family:	Hyaenidae
Diet:	Carnivore	Lifespan:	10-20 years
Conservation Status:	Least Concern	Population Trend:	Stable
Threat Level:	Low	Geographic Range:	Global Distribution

Interesting Biological Facts:

- The Spotted Hyena plays a vital role in keeping local ecosystems balanced.
- Detections of Spotted Hyena help ecologists monitor forest density trends.

AI Ecological Analysis & Recommendations

Based on current observation logs, the system generated the following conservation recommendations:

- Maintain buffer zones surrounding monitoring sites to reduce agricultural encroachment.
- Schedule automated patrol routing for forest rangers inside poaching hot spots.
- Establish sensor coordinates to log gunshots or chain-saw noises.
